Have you ever heard of “Heap
Spray”?

We were the guys that heap
sprayed the college from Amazon

2

CHINESE TAKEOUT

DAVE GRANLUND © www.davegranlund.com

I am contacting you on behalf of ISACA, formerly the Information Systems Audit and Control Association Trade Association, who would like to speak with you about how IT can transform cybersecurity using COBIT 5 – a framework to integrate cybersecurity with an overall approach to security governance, risk management and compliance. This is critical for IT teams in the wake of escalating Advanced Persistent Threats (APTs). More than 80 percent of 1500 security professionals surveyed by ISACA admit they are not prepared for APTs. The challenge of APTs is particularly daunting in the face of always-on connectivity, an increasing IT-centric society and a new class system that separates people by technology skills.
