

Let's Screw With nMap

NOSEY LITTLE BASTARD
AREN'T YOU?

DefCon 21, Las Vegas 2013

Hellfire Security

Gregory Pickett, CISSP, GCIA, GPEN
Chicago, Illinois

gregory.pickett@hellfiresecurity.com

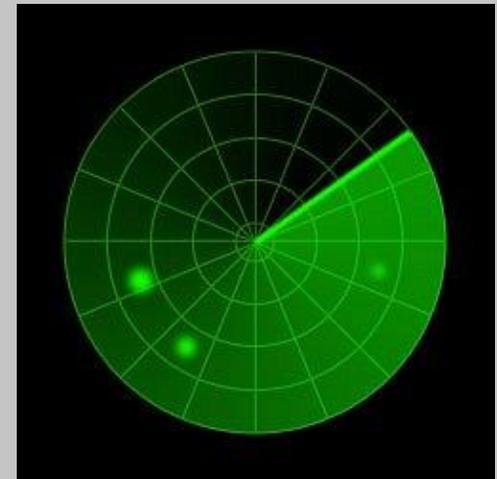

Overview

- ✦ **Nosey Bastards!**
- ✦ **All About Packet Normalization**
- ✦ **Working It All Out**
- ✦ **Putting It Into Practice**
- ✦ **Finishing Up**

Network Defenders

- ✦ **We see scans and probes of our network every day**
- ✦ **From the inside and from the outside**
- ✦ **Everybody is targeting us**
- ✦ **Identifying our assets**

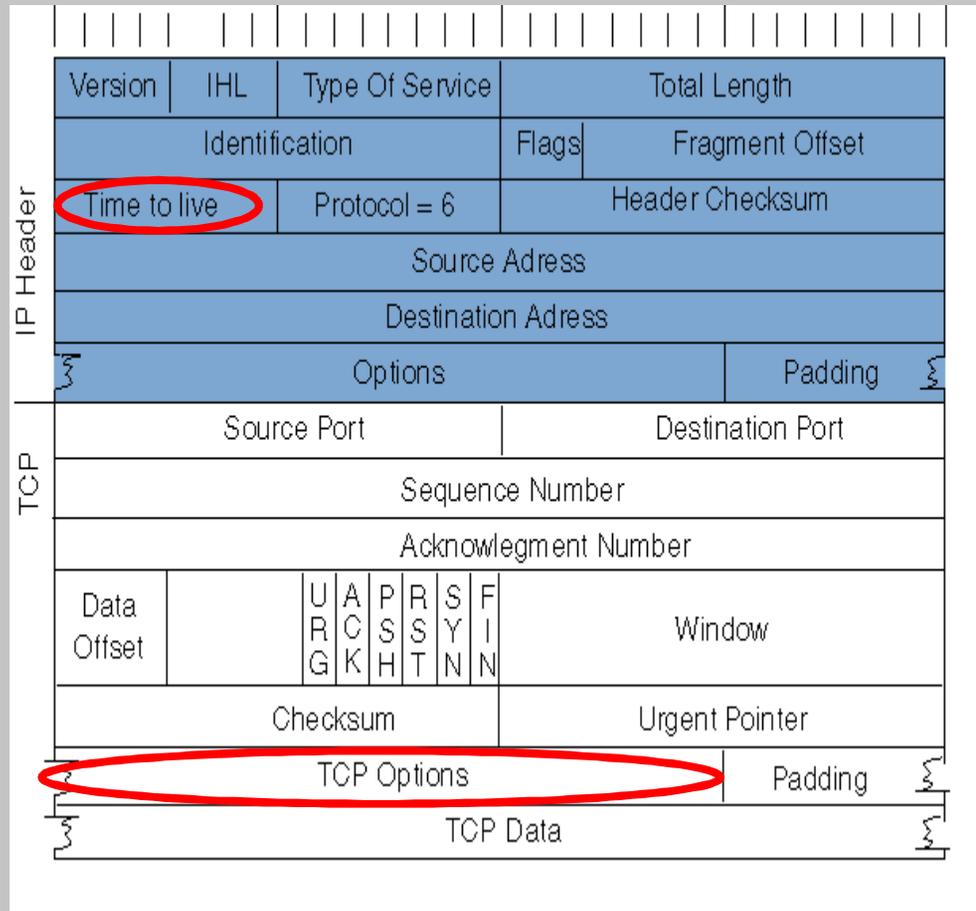

How They Do It

- ✦ **Network stack implementation is highly discretionary**
- ✦ **Differences identify the operating system type and version**
- ✦ **Allowing Attackers to identify their targets**
- ✦ **By matching the headers of their target to known operating system implementations**

If your target ...

- + Has a TTL of **128**
- + Uses the following options
 - + MSS of **1460**
 - + Single **NOP**
 - + Window Size **0**
 - + Single **NOP**
 - + Single **NOP**
 - + Ending **SACK**

... then it's likely a **Windows 2003 Sever!**

Implications

- ✦ **If they identify your assets ...**
- ✦ **They know their weaknesses**
- ✦ **How to attack them successfully**
- ✦ **Without triggering your sensors**

TSA-Style patdowns . . .

It's fact of life

But does it have to be?

No!

Why can't we ...

- ✦ **Remove the differences**
- ✦ **To remove their advantage**
- ✦ **Strip them of their ability to fingerprint**
- ✦ **To significantly reduce their chance of success**

My Answer

Packet

Normalization

OK. What is packet normalization?

- ✦ **Not an entirely developed concept**
- ✦ **Many expressions but most incomplete ...**

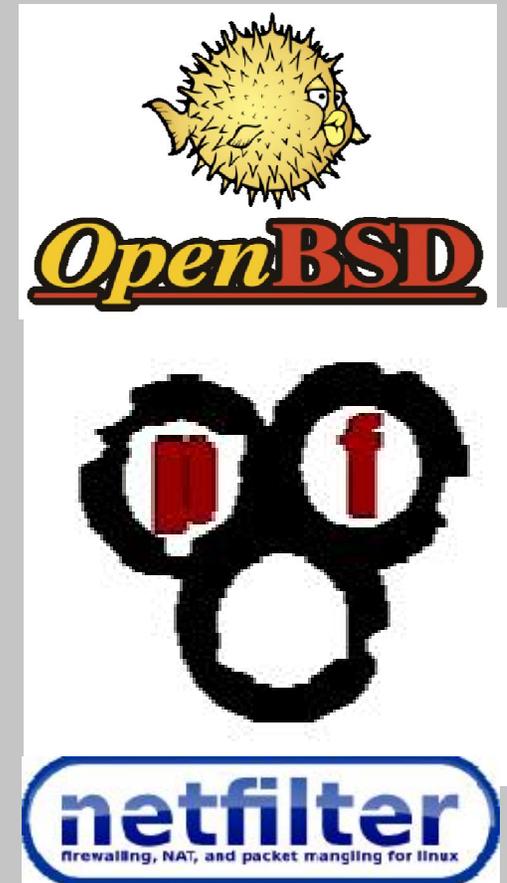

Normalization vs. Scrubbing

- ✦ **Scrubbing** is to do away with; cancel
- ✦ **Normalization** is to make normal, especially to cause to conform to a standard or norm
- ✦ Both are seen in varying degrees

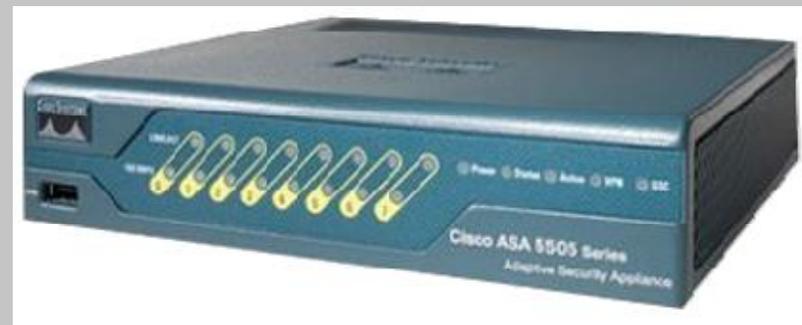

Scrubbing

- + Used by a number of firewalls
 - + Randomize IP ID
 - + Clear IP DF
- + Also ...
 - + Set IP tos/dscp, and ttl
 - + IP Fragment Reassembly
- + Primarily Concern
 - + Policy Violations
 - + Abnormal Packets
 - + Abnormal Flows

Scrubbing

- ✦ **Used by some network devices such as Cisco ACE and ASA**
 - ✦ **Random TCP SEQ**
 - ✦ **Clear TCP Reserved, and URG**
 - ✦ **Clears TCP Options**
 - ✦ **Minimum IP TTL**
- ✦ **Fragment Reassembly too ...**
- ✦ **Primarily Concern**
 - ✦ **Policy Violations**
 - ✦ **Abnormal Packets**
 - ✦ **Abnormal Flows**

Incoming Normalization

- ✦ **Used by IPS and IDS devices**
 - ✦ **IP Fragment Reassembly**
 - ✦ **IP TTL Evasion**
- ✦ **Primarily Concern**
 - ✦ **Detect Attacks**
 - ✦ **Detection Evasion**

Masquerading

- ✦ Examples
 - ✦ IP Personality
 - ✦ Morph
 - ✦ IP Morph
- ✦ Pretends to be ...
- ✦ Modifies the stack
- ✦ Host Only

SYN ACK LABS

Outgoing Normalization?

Not Really

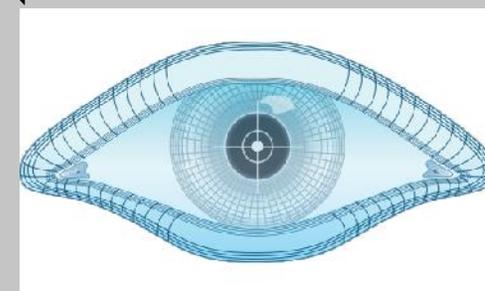

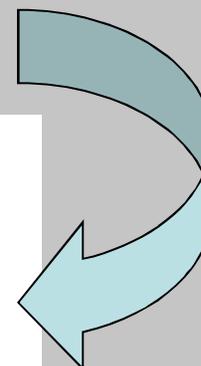

Fingerprinting Process

- ✦ TCP, UDP, and ICMP probes are sent
- ✦ Compile results into fingerprint

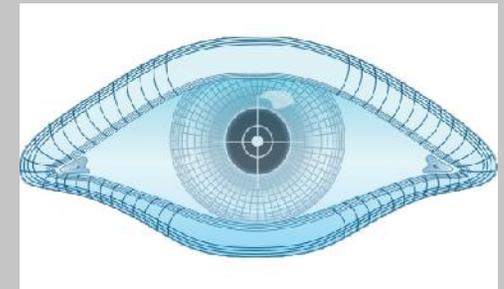

```
Fingerprint Linux 2.6.17 - 2.6.24  
Class Linux | Linux | 2.6.X | general purpose  
SEQ(SP=A5-D5%GCD=1-6%ISR=A/-D7%TI=Z%II=I%TS=U)  
OPS(O1=M400C%O2=M400C%O3=M400C%O4=M400C%O5=M400C%O6=M400C)  
WIN(W1=8018%W2=8018%W3=8018%W4=8018%W5=8018%W6=8018)  
ECN(R=Y%DF=Y%T=3B-45%TG=40%W=8018%O=M400C%CC=N%Q=)  
T1(R=Y%DF=Y%T=3B-45%TG=40%S=O%A=S+%F=AS%RD=0%Q=)  
T2(R=N)  
T3(R=Y%DF=Y%T=3B-45%TG=40%W=8018%S=O%A=S+%F=AS%RD=0%Q=)  
T4(R=Y%DF=Y%T=3B-45%TG=40%W=0%S=A%A=Z%F=R%O=%RD=0%Q=)  
T5(R=Y%DF=Y%T=3B-45%TG=40%W=0%S=Z%A=S+%F=AR%O=%RD=0%Q=)  
T6(R=Y%DF=Y%T=3B-45%TG=40%W=0%S=A%A=Z%F=R%O=%RD=0%Q=)  
T7(R=Y%DF=Y%T=3B-45%TG=40%W=0%S=Z%A=S+%F=AR%O=%RD=0%Q=)  
U1(DF=N%T=3B-45%TG=40%IPL=164%UN=0%RIPL=G%RID=G%RIPCK=G%RUCK=G%RUD=G)  
IE(DFI=N%T=3B-45%TG=40%CD=5)
```

- ✦ Compare against database
- ✦ Identify operating system

Where to Start?

- ✦ **Nmap fingerprint database**
- ✦ **What about other fingerprinting tools?**
 - ✦ **xprobe2**
 - ✦ **SinFP**
 - ✦ **Vulnerability scanners ... Nessus, Others**
- ✦ **Best to disrupt any existing patterns**

Scrubbing

- ✦ **Clear out any unnecessary values**
 - ✦ **IP ToS/DSCP/Traffic Class Cleared**
 - ✦ **IP ECN Cleared**
 - ✦ **TCP URG Flag and URG Pointer Cleared**
- ✦ **Randomize anything that you can**
 - ✦ **IP ID**
- ✦ **IP TTL/HOP Limit? TCP Options?**

Outgoing Normalization

Normalizing

(IP Time-To-Live / Hop Limit)

- ✦ **Make some assumptions**
 - ✦ **Originally Well-Known TTL**
 - ✦ **Decrements Only**
 - ✦ **Traveled < 32 hops**
- ✦ **Back into Original Starting TTL**
- ✦ **Estimate number of hops traveled**
- ✦ **Recalibrate current TTL**
- ✦ **Using Starting TTL of 255**

Normalizing (IP Time-To-Live / Hop Limit)

```
If <= 32 traveled = 32-current Then ttl = 255 - traveled  
If <= 64 traveled = 64-current Then ttl = 255 - traveled  
If <= 128 traveled = 128-current Then ttl = 255 - traveled  
Else ttl = current
```

- + Start with the lowest well known TTL first!
- + Several exceptions to this normalization ...
- + Will be discussed later

Normalizing (TCP Options)

✦ Assumptions

- ✦ Only Few Well Known Options Needed
- ✦ Order is unimportant
- ✦ Requirement ... Values can't be changed
- ✦ Read necessary options
- ✦ Discard the rest
- ✦ Rewrite options in proper order
- ✦ NOP ... till the end of the options

Normalizing (TCP Options)

✦ Options selected ... And their order

✦ MSS

✦ Window

✦ SACK

✦ MD5 ... if present

✦ After processing ...

MSS = 1460

Window = 0

SACK

NOP

NOP

NOP

Making everyone All Together same

With IDGuard

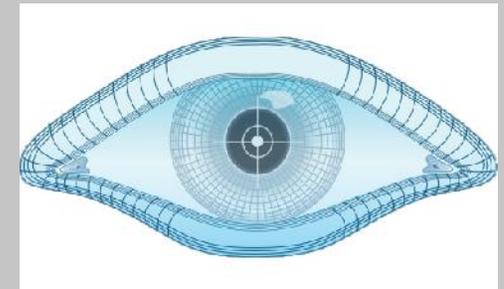

Selecting The Platform

✦ Identified Suitable Hardware

- ✦ Already Modified By Others
- ✦ Documentation Available ... Mikrotik Routerboards

✦ Identified Suitable Operating System

- ✦ Available Base
- ✦ Writeable File System ... OpenWrt

Deploying to Hardware

- ✦ **Purchase the hardware from a local vendor**
- ✦ **Create a netboot image for the RB450G**
- ✦ **Setup dhcp & tftp netboot environment**
- ✦ **Connect to the routerboard**
- ✦ **Configure routerboard for DHCP**
- ✦ **Netboot routerboard and flash**
- ✦ **Load kernel module manually or with a package**
- ✦ **Configure Firewall**

Deploying to Hardware

OpenWrt Wireless Freedom

[Development](#) [Documentation](#) [Downloads](#) [Wiki](#) [Forum](#)

You are here: [OpenWrt Wiki](#) » [Table of Hardware](#) » [Mikrotik](#) » [Mikrotik RouterBoard 450G \(RB-450G\)](#)

Mikrotik RouterBoard 450G (RB-450G)

The good news: Attitude Adjustment 12.09-rc1 works very well on the RB-450G. The device is built with good hardware, almost all of which is fully supported. With a fast processor, gigabit ethernet, and relatively huge amounts of RAM and flash, this is a very capable device once OpenWRT is installed.

The bad news: getting OpenWRT installed in the first place is not straightforward.

Installing a New Firmware Image

OpenWRT doesn't provide a firmware image that can be written directly to the flash memory via the firmware update system in Mikrotik's RouterOS. So installing OpenWRT is a two step process that requires two separate kernel images.

You're going to need a computer that can build OpenWRT from source. You're also going to need a desktop computer that has a working serial port and an ethernet interface. This computer will also need to have:

Table of Contents

- [Installing a New Firmware Image](#)
 - [Create a netboot image for the RB450G](#)
 - [Boot the RB450G from the network](#)
 - [Install the OpenWRT distribution](#)

- [Tags](#)

OK ... What worked?

I am really tired of those nosey bastards!

What Didn't Work

- ✦ **ToS/DSCP/Traffic Class Clearing**
- ✦ **ECN Clearing**
- ✦ **URG Flag and URG Pointer Clearing**
- ✦ **IP ID Randomization**
- ✦ **DF Clearing**

... the Scrubbing

What Worked

- ✦ **TTL Standardizing**
- ✦ **TCP Option Standardizing**

... the Normalization

End Results

 - ✦ **Banners and Direct Query**
 - ✦ **Identification Through Layer-7**

Challenges

✦ Authorized Activity

- ✦ Scanners

- ✦ Management Platforms

✦ Resolution

- ✦ IDGuard Excludes Them ...

Challenges

✦ **Banners and Direct Query**

- ✦ **Windows Networking Available**
- ✦ **Application-Layer Query**
- ✦ **OS Details in Reply**

✦ **Resolution**

- ✦ **Perimeter Network**
- ✦ **Internal Network**

Concerns

- ✦ **Connectivity**
 - ✦ **Fragmentation**
 - ✦ **Upstream**
 - ✦ **Downstream**
 - ✦ **TTL Attenuation**
 - ✦ **TTL Special Uses**
- ✦ **TCP Options Sensitivity?**
- ✦ **Link-Local Routing Protocols**

Concern

⊕ **Upstream Fragmentation**

- ⊕ **IP ID Randomized**
- ⊕ **“Fragmentation Needed” ICMP Message Received**
- ⊕ **Host is confused**
- ⊕ **Keeps sending original packet**

⊕ **Resolution**

- ⊕ **IDGuard Clears DF**

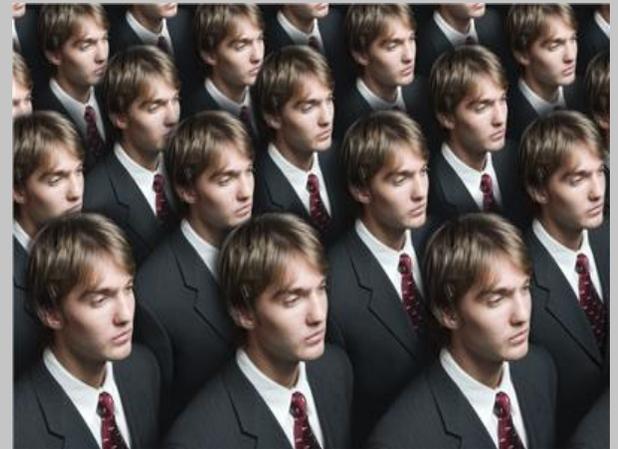

Concern

⊕ **Downstream Fragmentation**

- ⊕ **Each fragment given a different IP ID**
- ⊕ **Destination can't reassemble original**

⊕ **Resolution**

- ⊕ **Access switch placement**
- ⊕ **IDGuard Excludes Fragments**

Concern

⊕ **TTL Attenuation**

- ⊕ **Packet travels more than 32 hops**
- ⊕ **Not all these hops are accounted for ...**
- ⊕ **Packet TTL is continually extended**
- ⊕ **Routing Loop occurs**

⊕ **Resolution**

- ⊕ **Access Switch Placement**

Concern

⊕ **TTL Special Uses**

- ⊕ **TTL recalibrated**
- ⊕ **TTL never runs out**
- ⊕ **No Intermediate hop reports**
- ⊕ **Traceroute fails**

⊕ **Resolution**

- ⊕ **IDGuard Excludes ICMP Echo Requests**
- ⊕ **IDGuard Excludes the UDP traceroute range**

Concern

⊕ **Link-Local Routing Protocols**

- ⊕ **RIP packets have a TTL of 1**
- ⊕ **TTL of 255 is abnormal**
- ⊕ **Packet is malformed**

⊕ **Resolution**

- ⊕ **IDGuard Excludes Routing Protocols**

Concerns

- ✦ **Performance**
- ✦ **Break Something**
 - ✦ **Poorly Coded Applications**
 - ✦ **What else?**

Benefits

- ✦ **Shields from ...**
 - ✦ **Casual Attackers**
 - ✦ **Automated Assaults**
 - ✦ **Oblique Threats**
- ✦ **Protects ...**
 - ✦ **Unmanaged**
 - ✦ **Unpatched**
 - ✦ **Unhardened**
- ✦ **Defeats ... canned exploits**

What's Next

✦ More Platforms

- ✦ Open-Source Router Firmware
- ✦ Linux-Based Switches

✦ Production Trials

✦ Talk to vendors

Final Thoughts

- ✦ **Accurate target identification is key to a successful attack**
- ✦ **Identification that is way too easy for an attacker to perform**
- ✦ **Let's change that with fingerprint prevention**
- ✦ **I've proven that it can be done**
- ✦ **Now, we just have to make it happen**

Proof of Concept

IDGuard v0.50 for Linux-Based Networking

- Network-Wide Fingerprint Prevention
- IPv4, and TCP normalizations
- Authorized Activity Exclusions
- Linux Kernel Module Implementation

IDGuard v0.60 for Linux-Based Networking

- Adds IPv6 Support
- Coming Next Month!

SHA1 hash is **289256c1b46f7f7443527364ad4a75ee0a072160**
